Contents

Foundations of Trustworthy AI

This website is a demonstrator for authoring online training material in `Quarto`. See the companion website New Ways of Publishing: A Roadmap to Authoring Online Training Material for a detailed description of how this training material was created and the formats and tools used.

At the moment we offer the following two short courses related to Trustworthy AI as demonstrators:

- Introduction to Optimal Decision Making was created from scratch in `Quarto`, as described here.
- Classifier Calibration was converted to `Quarto` from LaTeX Beamer source, as described here. Note that this is a much more involved process, and some imperfections remain.

The content can be viewed in a variety of ways, following the Single-In-Multiple-Out paradigm. See the links under `Other Formats` in the right-hand panel.

This work forms part of a deliverable of the TAILOR Network of Trustworthy AI through Integrating Learning, Optimisation and Reasoning and is made freely available to the academic community.
